

Patient Information Sheet

Referral Process

When your provider gives you a referral to a specialist, or for a diagnostic test, it is important to your health care. Discuss with your provider and nurse the importance of the referral and consequences of not following through with specialists and/or testing.

Our designated staff will communicate with you about how to select a specialist covered by your insurance or that meets your financial status. After you have selected a specialist from the options available, you will be given their contact information. OMC will forward the referral information to the selected facility. It is your responsibility to contact the facility as soon as possible to make an appointment and to let us know your appointment date.

To give us updates on your referral you may call 318-357-2050 and leave a message for our referral coordinator or alternatively email us at: referrals@outpatientmedical.org

It is also your responsibility to have a copy of your referral record sent to OMC or to bring it back yourself. Having these notes are very important to your care and without them our ability to care for your specific needs will be hindered. We are here to help you make your referral.
